DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18, drawn to methods of diagnosing Alzheimer's disease by screening for cell-cycle defects, classified in class 435, subclass 4.
 - II. Claims 19-27, drawn to methods of diagnosing Alzheimer's disease through genetic screening, classified in class 435, subclass 6.
 - III. Claims 28-29, drawn to methods for identifying compounds with potential pharmacological activity against Alzheimer's disease, classified in class 435, subclass 4.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to separate methods which comprise different process steps in their execution. Thus these methods all have different modes of operation. Additionally, Group III has a different end product from either Groups I or II, as Group III seeks to identify a useful product, while Groups I and II both seek to identify a disease state within an individual. Because these inventions are distinct for the reasons given above and the searches required for Groups I-III are not coextensive and to search all limitations of the three groups would be burdensome, restriction for examination purposes as indicated is proper.

Conclusion

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
